Heat resistant wheels & castors

- Heat resistant wheels produced from a variety of materials (please check with sales office for full details)
- Plain, glacier and ball bearing bore wheels. All wheels are free of recognised carcinogens
- Variable resistance to diluted chemicals (please check with sales office for full details)
- Heat Stable Wheels are heat resistant, synthetic material. Asbestos-free. Recommended for the food processing industry. Not recommended for use with concentrated organic acids or strong minerals
- Operating temperature - see individual item

Available Bore Types

Plain Bore

Environments of Use

- Weak Acids
- Strong Acids
- Water
- Alcohol
- Weak Bases
- Strong Bases
- Hydrocarbons
- Solvents

Uses

Their resistance to high temperature makes them particularly suitable for use in the food industry and in cooking ovens, particularly in bakeries. They are fitted with brackets and axle components, which are specific for high temperatures. The ball bearing version ensures an excellent performance and the absence of squeaking over long cycle time applications, even in presence of heavy loads. They are resistant to medium-harsh chemical agents. Not suitable in presence of obstacles along the path or on delicate flooring.

Industries

Food Industry

Floor Suitability

Suitable on tiles and resin-cement; not recommended on abrasive, unpaved floors or in presence of processing residues. Not suitable on fragile floors or with obstacles along the path.
